

By Default, Microsoft Teams is not compatible with many USB HDMI capture devices. Please follow the instructions detailed to configure the Lindy HDMI to USB 3.0 Video Capture Device [43235] to work as a video input within the Microsoft Teams application using Open Broadcast Software [OBS]

- Download & Install OBS.
- Open the software and navigate to the 'sources' section [Appendix 1].
- Right click on the + button and input a name for the source device, ensure the 'Make source visible' checkbox is selected & press OK [Appendix 2].
- A new window will open entitled Properties for 'New Capture Device', there is no need to alter any settings, simply press OK. [Appendix 3] **Please note:** If using a laptop, ensure you select 'USB Video Device'.
- Under the 'Controls' section, select 'Start Virtual Camera'. [Appendix 4]
- Minimise the OBS window and Open Teams.
- Click on the Name Icon next to the minimise button on teams, then 'Settings'. Enter the 'Devices' tab. Under 'Camera' Select 'OBS Virtual Camera' as the input source. [Appendix 5]
- Any active camera connected to 43235 will output video to Teams.

For any further assistance with this, or any other issue. Please contact your local Lindy Support team.
